

1 Prerequisites
2 a. Windows server 2012 or upper (for laptop or PC, Windows 10 with IIS
3 activated). Warning: Before installing .NET CORE and .NET 6, IIS must be
4 activated
5 b. .NET 6.0.x with .NET Core hosting bundle for IIS
6 c. Microsoft Visual C++ 2015 Redistributable Update 3 o upper
7 d. MS SQL Server 2012 or upper. SQL Server 2016 o upper is suggested in order to
8 harness "columnStore " Indexes to increase performance. MS SQL Server Express
9 Edition can be used
10 The installation of SQL Server must include SQL Server Management Studio
11 Setup
12 1. Unzip the setup file
13 2. In the folder containing the unzipped file, edit the
14 "application_parameters_MDM.bat" the "Config_MDM" folder in order to configure
15 the setup parameters (Database names, URLs, Paths, application pool names, etc)
16 3. Run the command prompt ("cmd" application) as administrator
17 4. Through the command line statements change directory up to the directory
18 containing the setup files and folders
19 5. Execute the "Install_MDM.bat" file
20 6. At the end of the execution of the "Install_MDM.bat" file will be
21 automatically launched on the internet browser the setup wizard of the DM_API_WS
22 for creating the database schemas.
23 (Username:admin with no password)
24 7. launch the MDM application (http(s)://<server_URL>/<virtual_directory(if
25 existing)>/<MDM_folder>/client) and open the administration interface for
26 configuring application and nodes by following the user manual's
27 instructions
